EDUCATION

Vellore Institute of Technology (VIT)

MTech Integrated – Software Engineering | CGPA: 8.65

Vellore, India

2022 – 2027

Al Khor International School (CBSE)

Grade 12: 91.4% | Grade 10: 97% – CBSE Merit Certificate

Qatar

2010 – 2022

EXPERIENCE

Software Development Intern

June 2025 – July 2025

NXTIO Technologies Pvt. Ltd.

Chennai, India

- Tested REST APIs using Postman to check authentication, response codes, error handling, and data validation across multiple endpoints.
- Built mobile app screens using Flutter (Material Design) and worked to improve API reliability.

PROJECTS

Deepfake Detection System | Python, PyTorch, CNNs, OpenCV, Scikit-learn | [GitHub](#)

- Built a deep learning model to detect AI-generated fake images using CNNs, trained on a dataset of 140,000 images.
- Achieved 93.85% test accuracy with ROC-AUC of 0.9939 and PR-AUC of 0.9943 on 21,000 test images.
- Measured model quality using precision, recall, F1-score, and AUC – the same metrics used to evaluate security detection tools.

Big Data E-Commerce Review Analysis | Apache Hadoop, MapReduce, Python, NLP, Scikit-learn

- Developed a big data analytics pipeline using Hadoop HDFS and MapReduce to process and analyse large-scale e-commerce review datasets.
- Implemented TF-IDF feature extraction and machine learning models (Logistic Regression, SVM, Naive Bayes) for sentiment classification with 85% accuracy.
- Visualized customer sentiment trends and generated analytical summaries to derive insights from product review data.

Secure Finance Management App | PHP, MySQL, JavaScript, HTML, CSS | [GitHub](#)

- Built a full-stack web app with user login, transaction tracking, and financial dashboards.
- Added session-based authentication with password hashing and used parameterised queries to prevent SQL injection.
- Implemented role-based access so users can only see their own data.

PATENT

Solar-Powered IoT-Enabled Microgreen Irrigation Pods for Households and Anganwadis

Co-Inventor | Indian Patent Application No. 202541030147

Jan 2026

- Designed and developed an IoT-based smart irrigation system using environmental sensors and microcontrollers for automated watering based on soil moisture and climate conditions.
- Integrated solar-powered energy support and wireless communication modules for remote monitoring and efficient water management with minimal manual intervention.

TECHNICAL SKILLS

Core: Data Structures & Algorithms, Object Oriented Programming, Operating Systems, DBMS, Computer Networks

Languages: Java, Python, SQL

AI/ML: PyTorch, TensorFlow, OpenCV, CNNs, Transformers, NLP, Model Evaluation

Security: Basic Network Security, Authentication & Authorization, REST API Testing

Tools: GitHub, Postman

ACHIEVEMENTS

Competitive Programming: Solved 100+ problems on LeetCode.

Certification: Google Cybersecurity - Coursera

Hackathons: Participated in 2 university-level technical hackathons.
